

More Possibilities. The Scaffolding System.

Layher to exhibit at the World of Concrete January 24-27, 2012, Las Vegas, NV

Make Plans to See Our Innovative Line of Scaffold and Accessories!!!

Layher, the leading manufacturer of scaffold, will be at the WOC 2012 during the fourth week of January. **Please visit us in the North Hall, Booth N1663.**

Layher will be featuring several innovative scaffold designs such as:

Keder Roof – The Keder sheet roof system provides economical weather protection with a lightweight design and attractive appearance. Keder sheet roofs can be assembled in next to no time and without using a crane: a convincingly inexpensive and complete solution for spanning small and medium-sized gaps. Whether as a double-pitch, mono-pitch or asymmetrical roof, for use in refurbishment work or to protect stage areas - the Keder sheet roof system is guaranteed to be useful.

Protect System - The Layher Protect System can easily be fitted to either Layher's SpeedyScaf or Allround scaffolding system. Protect System cassettes have lightweight aluminum frames with either sheet steel or translucent plastic panels, depending on the requirement. Engineered to Layher's high standards, the Protect System provides environmental protection for a wide range of situations.

Heavy Duty Columns - Easily, logically and quickly assembled from a few parts—Layher's classic support scaffolding system can take on the heaviest loads and toughest, complex assignments.

Falsework - With its new Allround falsework frame, Layher is optimizing the use of falsework structures. Taking Allround equipment as the basis, a few additional parts enable considerably shorter assembly and dismantling times for falsework.
